Mini-PROTEAN® Electrophoresis System

Welcome to the Fast Lane
For more than 20 years, the Mini-PROTEAN Electrophoresis System has set the standard for excellence in protein electrophoresis. The Mini-PROTEAN Tetra Cell and the new Mini-PROTEAN® TGX™ Precast Gels are the next-generation mini-format system for 1-D and 2-D vertical gel electrophoresis. Casting and running gels has never been quicker or easier.

**Mini-PROTEAN Tetra Cell**
The versatile, easy-to-use Mini-PROTEAN Tetra Cell is ideal for your vertical mini gel electrophoresis and blotting needs. It is easy to assemble, leakproof, robust, and accommodates up to four handcast, Mini-PROTEAN Precast, or Ready Gel® Precast Gels. With the optional Mini Trans-Blot® Module, conveniently blot gels using the same cell.

**Mini-PROTEAN TGX Precast Gels**
The long shelf life Mini-PROTEAN TGX (Tris Glycine eXtended) Precast Gels accelerate your electrophoresis without compromising performance.

- Run up to 4 Mini-PROTEAN Gels in as little as 15 min
- Transfer to membranes in as little as 15 min
- Bottom-open cassette design for faster setup and less handling prior to downstream applications
- Rapidly screen new samples for discovery projects or process development and optimization projects

Refer to the Life Science Research Product Catalog or go to [bio-rad.com/ProteinElectroBlot](http://bio-rad.com/ProteinElectroBlot) for more information on Bio-Rad’s vertical electrophoresis cells.
Mini-PROTEAN Tetra Cell

The Mini-PROTEAN Tetra Cell runs up to four mini gels in as little as 15 minutes. The Tetra Cell is easy to assemble, leakproof, and reliable, providing reproducible, superior performance. Designed with flexibility in mind, the Mini-PROTEAN Tetra Cell can be used with Bio-Rad handcast or precast gels and can be configured to match throughput and blotting needs. Running and blotting gels has never been easier or faster.

Modular Cells for Many Applications

Interchangeable modules easily convert a Mini-PROTEAN Tetra Cell from one application to another. Each module fits into the same buffer tank and lid to form a complete cell.

- Mini-PROTEAN Tetra Electrophoresis Cell Modules — for running precast or handcast gels for 1-D and 2-D protein separations and nucleic acid PAGE separations
- Mini Trans-Blot Electrophoretic Transfer Cell — for transferring proteins from gels to PVDF or nitrocellulose membranes

To configure your own electrophoresis cell, order the Mini-PROTEAN Tetra Cell, catalog #1658004 (for running 1–4 gels) or #1658005 (for running 1–2 gels).

Loading and Running Innovations

- Cell runs 1–4 gels using 1–2 running modules
- Improved core design with patented wing closures facilitates easier assembly and prevents buffer leakage
- Patented sample loading guides* allow easy sample loading and help prevent skipping or reloading lanes

Casting Advantages

- Casting frames with simple cam closure provide precise alignment on any flat surface
- Patented side-by-side casting stand** allows access to two gels simultaneously. The spring-loaded lever creates a tight seal against the silicone gaskets to ensure leak-free casting
- Ground-glass plates with permanently bonded spacers guarantee perfect alignment and leak-free casting
- Thick glass spacer plates reduce breakage
- Glass plates and combs are labeled with thickness and number of wells for instant identification
- Innovative, patented plastic combs** have a built-in ridge to eliminate air contact during gel casting for uniform gel polymerization
- For added convenience over traditional glass plates, Mini-PROTEAN Empty Plastic Cassettes (pre-assembled) and Combs are also available

For running handcast gels, select a casting module from the ordering information. For ordering convenience, order one of the preset configurations based on the required gel thickness.

* U.S. patent 5,656,145.
** U.S. patent 6,162,342.
Reproducibility and High Throughput

Fig. 1. High-throughput and reproducible protein separation using the Mini-PROTEAN Tetra Electrophoresis System. Four 10% Mini-PROTEAN TGX Precast Gels were run using the Mini-PROTEAN Tetra System. Lanes 1 and 10, Precision Plus Protein™ Unstained Protein Standards; lanes 2–5, E. coli; lanes 6–9 HeLa cell lysate. The gels were run at 200 V followed by staining with Bio-Safe™ Coomassie Stain. Images were acquired with a GS-800™ Calibrated Densitometer.

Consistent Transfer

Fig. 2. Precision Plus Protein™ WesternC™ Standards and dilution series of a 51 kD protein tagged with GST detected by chemiluminescent western blot. E. coli lysate containing an overexpressed protein tagged with GST was electrophoresed on a 4–20% Mini-PROTEAN TGX Gel and blotted using the Mini-PROTEAN Tetra Blotting Core onto an Immun-Blot® PVDF Membrane. The blot was then developed using the Immun-Star™ WesternC™ Chemiluminescent Kit and the image was acquired on the ChemiDoc™ XRS Imaging System. Lanes 1 and 10, Precision Plus Protein WesternC Standards; lanes 2–9, 51 kD protein tagged with GST 1,000, 500, 250, 125, 62.5, 31.3, 15.6, 7.8 ng, respectively.

Mini-PROTEAN® 3 Dodeca™ Cell

The Mini-PROTEAN 3 Dodeca Cell is designed for high-throughput electrophoresis. Run up to 12 Mini-PROTEAN TGX Gels under identical conditions in as little as 15 minutes with high-resolution results. The Dodeca Cell is easy to assemble and offers the flexibility of using precast or handcast gels. Precast gels offer the convenience and reproducibility demanded by high-throughput laboratories. If hand casting gels, eliminate gel-to-gel variation by hand casting gels 12 at a time using the Mini-PROTEAN 3 Multi-Casting Chamber and a Model 485 Gradient Former.

Features of the Mini-PROTEAN 3 Dodeca Cell include:

- Capacity to run up to 12 gels simultaneously
- Built-in cooling coil that attaches to an external refrigerated circulator to prevent overheating and ensure highest-resolution results
- Stirbar capability that helps maintain uniform buffer tank temperatures for run reproducibility
- Easy assembly facilitated by a patented* electrophoresis clamping frame
- Convenient buffer draining via the built-in quick-connect drain port
- Compact footprint that saves benchspace

* U.S. patent 6,436,262.

Mini-PROTEAN TGX Precast Gels

Introducing the New Long Shelf Life Mini-PROTEAN TGX Precast Gels

The new Mini-PROTEAN TGX (Tris-Glycine extended) Precast Gels for PAGE accelerate your electrophoresis and blotting while delivering superior performance. TGX Gels maintain cooler temperatures at high voltages allowing run times and transfer times as short as 15 minutes. Optimized for standard Laemmli Systems, TGX Gels retain Laemmli-like separation characteristics using the standard sample and Tris/glycine running buffers. A patent-pending modification to the Laemmli System extends the shelf life to at least 12 months with exceptionally stable and reproducible results.

Get superior results with a fast and convenient Mini-PROTEAN System.

- Run times as short as 15 min
- Transfer in as little as 15 min (wet tank with Tetra Cell)
- Optimized for Laemmli Systems
- Traditional buffer system, low running costs
- Accurate molecular weight estimation
- 12-month shelf life
- Easy-to-open cassette designed for faster setup and less handling prior to downstream processing
- Gels contain no SDS and can be used for native PAGE applications
- Available in stain-free format, where protein sample band visualization is enabled (using stain-free enabled imagers) without staining and destaining

Mini-PROTEAN TGX Gels are currently available in 7.5%, 10%, 12%, 8–16%, 4–15%, 4–20%, and a unique formulation, Any kD™, which offers separation for proteins in the 10–250 kD molecular weight range and can be used as a screening gel. Any kD Gel delivers exceptional resolution for proteins in the 10–100 kD range, which are typically represented in a 2-D sample, and hence is an ideal precast gel for 2-D applications.

Fig. 3. Migration charts for Mini-PROTEAN TGX Gels.
**Mini-PROTEAN TGX Gel (10%) vs. NuPAGE Gel (10%)**

**Short Run Times**
The Mini-PROTEAN TGX Gels maintain cooler temperatures at higher voltages while delivering high-resolution results. With the TGX Gels, run or blot your gels in as little as 15 minutes.

**Mini-PROTEAN TGX Gels Maintain Cooler Temperatures at High Voltages, Reducing Run Time and Delivering Results Faster**

Fig. 4. 4–15% Mini-PROTEAN TGX Gels run at various voltages. Gels were loaded as follows: lane 1, Precision Plus Protein Unstained Standards; lanes 2–4, mouse liver; lanes 5–7, E. coli; lanes 8–10, mouse brain.

**Specifications**

- Gel dimensions (W x L x thickness): 8.6 x 6.7 x 0.1 cm
- Cassette dimensions (W x L x thickness): 10.0 x 8.0 x 0.46 cm
- Cassette material: Styrene copolymer
- Comb material: Polycarbonate
- Gel storage conditions: Store flat at 2–8°C; do not freeze
- Shelf life at 4°C*: 12 months
- Recommended sample buffer (Laemmli, dilute 1:1 with sample): 62.5 mM Tris-HCl, pH 6.8, 2% SDS, 20% (v/v) glycerol, 0.01% bromophenol blue
- Recommended running buffer: (Tris/glycine/SDS) 25 mM Tris, 192 mM glycine, 0.1% SDS, pH 8.3

*From date of manufacture.
Robust PAGE System
The Mini-PROTEAN TGX Gels have been formulated to handle a wide variety of samples and sample buffers. The gels have uniform lanes with symmetrical band shapes regardless of sample composition.

Consistent Performance
The Mini-PROTEAN TGX chemistry is a modified Laemmli formulation that ensures the stability of the gel matrix over 12 months. The new precast gels deliver superior protein resolution and reproducibility through the shelf life of the precast gel.

Fig. 6. Various samples run on Mini-PROTEAN TGX Gels. A variety of samples were loaded in a volume of 5 µl in the following order: lanes 1 and 9, Precision Plus Protein Unstained Standards; lanes 2 and 10, broad range SDS-PAGE standards; lane 3, rat midbrain extract; lane 4, salmon muscle extract; lane 6, rat liver microsomes; lane 7, bacteriophage T5; lane 8, soluble spinach protein.

Fig. 5. Performance of Mini-PROTEAN TGX Gels following prolonged storage at 37°C. One day of storage at 37°C is equivalent to one month at 4°C. Data shown is representative of 0–12 months. For further details refer to Bulletin 5910.
Greater Transfer Efficiency
The Mini-PROTEAN TGX Precast Gels provide speed and excellent transfer efficiencies when blotting with standard Towbin buffers using either wet/tank or semi-dry transfer systems. The proteins from the gel can be easily transferred onto a PVDF or nitrocellulose membrane in as little as 15 minutes (wet/tank) or in as little as 3 minutes (using the Trans-Blot® Turbo™ System).

Fig. 7. High transfer efficiency of Mini-PROTEAN TGX Precast Gels. Mini-PROTEAN TGX or NuPAGE Bis-Tris Gels were loaded as follows: lane 1, 5 µl Precision Plus Protein Unstained Standards; lane 2, 15 µg mouse liver; lane 3, 10 µg mouse liver; lane 4, 5 µg mouse liver; lane 5, 15 µg E. coli; lane 6, 10 µg E. coli; lane 7, 5 µg E. coli; lane 8, 15 µg mouse brain; lane 9, 10 µg mouse brain; lane 10, 5 µg mouse brain. Gels were run using Tris/glycine/SDS buffer for TGX Gels or MOPS buffer for NuPAGE Gels. The proteins from the gel were then transferred onto nitrocellulose membranes in a Mini-PROTEAN Tetra Cell using the Mini Trans-Blot Module at 150 V (constant voltage) for 15 min with pre-chilled Towbin buffer. Protein transfer was evaluated by staining the membrane with SYPRO Ruby Blot Stain and imaging on the PharosFX™ Imager (A). Proteins remaining in the gel following transfer were visualized by staining with SYPRO Ruby Gel Stain and imaging with the PharosFX Imager (B).
Mini-PROTEAN and Ready Gel Precast Gels

Ready Gel Precast Gels are designed in the traditional 8 x 10 cm mini vertical format. Proteins and nucleic acids can be separated with Ready Gel Precast Gels using the Mini-PROTEAN Tetra Electrophoresis Cell (1–4 gels) or, for high-throughput applications, the Mini-PROTEAN 3 Dodeca Cell (1–12 gels). The Ready Gel Precast Gels are available in six buffer formulations for a variety of applications.

* From date of manufacture.

Mini-PROTEAN (non-TGX) Precast Gels are available in Tris-tricine, TBE, and TBE-urea formats. The Mini-PROTEAN Gels are also compatible with the Mini-PROTEAN Tetra Cell and Mini-PROTEAN 3 Dodeca Cell.

**Ready Gel Tris-HCl Precast Gels**
Tris-HCl gels are used in SDS-PAGE for separating complex protein mixtures by size, allowing estimation of the molecular weight of sample proteins. The gels can be used to run proteins under nondenaturing conditions for subsequent analysis of their native conformation and activity by omitting SDS from the running buffer. Ready Gel Tris-HCl Precast Gels are made without SDS. SDS is added to the sample and running buffer to create standard SDS denaturing electrophoresis conditions.

**Mini-PROTEAN Tris-Tricine Precast Gels**
Tris-tricine gels are ideal for separation of peptides and small proteins with a molecular weight <10,000. Superior resolution is achieved by slowing the migration rate of the peptide-SDS complexes. This helps achieve separation from the faster-moving SDS micelles that interfere with peptide resolution in Tris-glycine buffer systems.

**Ready Gel IEF Precast Gels**
Isoelectric focusing (IEF) gels separate proteins based on their net charge rather than their molecular weight. IEF gels are cast with carrier ampholytes to create a pH gradient within the gel.

**Mini-PROTEAN TBE Precast Gels**
TBE gels are suitable for electrophoresis of nucleic acids from 50 to 2,000 base pairs; they are ideal for analysis of the purity of PCR products, standard dsDNA analysis, and RNase protection assays.

**Mini-PROTEAN and Ready Gel TBE-Urea Precast Gels**
TBE-urea gels maintain denaturing conditions for analysis of single-stranded DNA and RNA. Nucleic acids between 60 and 200 bases are resolved as sharp, distinct bands.

**Ready Gel Zymogram Precast Gels**
Zymogram gels contain gelatin or casein, which are substrates for proteases. Samples with proteolytic activity can be visualized as clear bands against a blue background after Coomassie Brilliant Blue R-250 staining.
