Platelia Aspergillus IgG Assay

Aids in diagnosing various forms of chronic aspergillosis in immunocompetent patients

Highly sensitive and specific assay for anti-Aspergillus IgG detection

*Aspergillus* species are opportunistic pathogens responsible for a variety of chronic allergic or non-allergic pathologies in immunocompetent individuals including asthma, ABPA (allergic bronchopulmonary aspergillosis), extrinsic alveolitis (farmer’s lung disease, bird-raiser’s disease), aspergilloma, and chronic necrotic aspergillosis.

Diagnosing various forms of aspergillosis is often difficult because clinical signs and radiological examination may suggest other fungal, bacterial, or even cancerous diseases.

The Platelia Aspergillus IgG assay is a highly sensitive and specific serological test representing an indispensable diagnostic tool for detecting anti-Aspergillus antibodies in immunocompetent patients.
Platelia *Aspergillus* IgG assay for detection of anti-*Aspergillus* antibodies

Indirect immunoenzymatic assay for detection of chronic pathologies associated with *Aspergillus* in human serum or plasma

**Convenient**
- 96-well microplate with breakable strips
- Ready-to-use, colored reagents (diluents, calibrators, conjugate, chromogen)

**Rapid**
- 2 hr 30 min turnaround time

**Reliable**
- Excellent sensitivity and specificity
- Faster initiation of appropriate treatment

**Secured**
Visual control of sample dilution and reagent deposit

**Objective**
Results reported as AU/ml

---

**Recommended Testing Systems**

The Bio-Rad EVOLIS Systems, with the highest level of pipetting safety, and the PW40/PR4100 are recommended instruments for testing with the Platelia *Aspergillus* IgG Assay.

**BRiCare Support and Monitoring**

BRiCare is Bio-Rad’s instrument monitoring application that provides remote service and support.
