BioPlex 2200 Syphilis Total & RPR Assay

Simultaneous detection and differentiation of Treponemal and non-Treponemal antibodies

The BioPlex Syphilis Total & RPR assay is the only dual treponemal/non-treponemal immunoassay test that offers laboratories a global one-step testing solution for Syphilis screening. The BioPlex Syphilis Total & RPR kit is intended for the qualitative detection of Total (IgG/IgM) antibodies to Treponema pallidum and the qualitative detection and/or titer determination of non-treponemal reagin antibodies in human serum or plasma.

- Syphilis Total (IgG/IgM)
- RPR (Rapid Plasma Reagin)
Simplify your Workflow

Traditional or Reverse Algorithm
Screen with a reagin test or Treponemal assay (EIA/CLIA). Confirmation by an orthogonal test.
- 2 sample aliquots
- 2 test results

BioPlex Test
Tests for both Syphilis Total & RPR, with the flexibility to order only one and/or both analytes.
- 1 sample aliquot
- 2 test results/sample

Performance
- Excellent negative agreement with commercially available methods for both Syphilis Total (98.9%) and RPR (99.5%)
- Excellent positive agreement with commercially available methods for medically diagnosed samples for Syphilis Total (99.1%) and RPR (100%)
- Excellent total precision for Syphilis Total (≤11.2%) and RPR (≤13.4%)

Improved Laboratory Workflow
- Simultaneous detection of Syphilis Total & RPR for higher total throughput, time and labor savings and improved patient management
- Fully automated RPR assay reduces hands-on time with accurate and objective result reporting and LIS traceability
- On-board RPR titer/dilutions (1:4, 1:8, 1:16, 1:32, 1:64)
- Time to first result in 45 minutes
- Up to 200 results per hour; up to 2 different reportable test results from 1 patient sample
- Ready-to-use calibrators and controls
- Calibrator curve stability up to 30 days
